Dataset folder
(browser, client, CLI or bulk tool)
Project schema
1 Classify files
skip patterns, file classes (globs),
parts from sub-folder pattern, time stamps
2 Extract parameters
parameter sources in order:
JSON / YAML, key-value files, folder name
3 Store objects
key = datasets/<uuid>/<relative path>
SHA-256 checksum
4 Register metadata
dataset, parts, files, quantities,
timing, schema hash
5 Process (ml-api)
graph nodes, shared resources,
parameter vector, SIMILAR_PARAMS edges
user or API
6 Field embedding (on demand)
incremental PCA of snapshot fields;
SIMILAR_FIELDS edges
